1. Please introduce yourself and tell us about your project College Info Nepal.

Hi, I'm Ronish Dhakal, Founder of College Info Nepal. It's a platform where students can explore top colleges, courses, events, and send inquiries directly. We also post exam routines, scholarships, and admission updates — all in one place.

2. How did our team approach and solve your problems or requirements?

The Vrit Tech team quickly understood what we were trying to build. They explained things clearly and offered solid technical solutions from the start.

3. Did the project design and functionality meet your needs?

Yes, it matched exactly what we wanted — clean, student-focused, and easy to use. The dashboard, filters, and inquiry system all work perfectly.

4. Were the design and functionalities thoughtfully implemented?

Definitely. Everything was done with care, and the final site looked even better than what we had imagined in the beginning.

5. How would you describe your experience working with our team?

It was smooth and fun. They were easy to work with, always updated us, and treated the project like a real partnership — not just a job.

6. How responsive was our team to feedback or changes?

Very responsive. They handled feedback quickly and even worked late at times to make sure things were done right.

7. Have you received any positive feedback since launch?

Yes, a lot. Students are actively sending inquiries, and colleges love how easily they can manage their profile through our free dashboard.

8. How did our implementation meet or exceed your vision?

It matched our vision and went beyond. The final result was more polished and smooth than we expected.

9. Thoughts on the platform handling high traffic?

Super impressed. Knowing it can handle huge traffic gives us full confidence to grow without worrying about crashes.

10. How scalable is the new platform compared to the old one?

Way more scalable. Our old setup wasn't built for growth. This one is future-ready.

11. How smooth was the migration?

Very smooth. We mapped all old URLs, so there were no broken links or 404 errors.

12. How's the speed and performance now?

Much better. Faster loading, smoother experience — students can find what they need quickly.

13. What impressed you most about working with the team?

The commitment. They were professional, on time, and even worked late nights when needed.

15. Are you satisfied with the service quality for the price you paid?

More than satisfied. For what we paid, the quality was beyond what we expected. It's definitely not overpriced — I'd actually say it's a bit underrated given the effort and result.

16. If recommending us, what would you highlight as our strength?

I'd say — they really *listen*. And they don't just build blindly. They help shape the product with you. Their communication, work ethic, and technical skills are top-tier.

17. Would you work with us again for future projects? Why?

Absolutely, yes. This was a great experience from start to finish. And now that we know how well they deliver, we're confident bringing more projects to them.

18. How confident are you in the team for future updates or improvements?

Very confident. They've built a strong base and proven they understand the tech and the vision. We feel good knowing they'll be around to help as we grow and improve the platform.
